

**21. DEANS AVENUE/FENDALTON ROAD/HARPER AVENUE
INTERSECTION IMPROVEMENTS**

RR 8786

Information along with an accompanying plan was submitted on proposed safety works aimed at improving the intersection's accident history.

Features of the work involved lane realignments and modifications to kerb extensions and islands to provide better definition and safety for motorists, cyclists and pedestrians.

Mention was made of the need to introduce coloured plantings as part of the work given the profile of this intersection being the key entry point from the airport to the city centre.

Coloured cycleway markings and the need to consult with the nearby Christchurch Girls' High School on the scheme were also requested.

The Board **received** the report and further **decided** that coloured landscape plantings and red coloured cycle lanes be provided at the intersection. Further that if not already undertaken, Christchurch Girls' High School be consulted on the scheme.
