

22. MURRAY PLACE–KERB AND CHANNEL RENEWAL

RR 8987

The Board was advised that the Environmental Policy and Planning Unit had indicated that the majority of funding needed to undertake the undergrounding of services in Murray Place was available and that this work would be done in conjunction with the proposed replacement of the kerb and dish channel in this years capital works programme.

A publicity plan on the proposal would be submitted to the Board early in the new year with the proviso that the balance of funding is available to complete the project.

The Board **received** the information.
