

12. GROWING COMMUNITIES - ORGANIC RESOURCES FOR SOCIAL NEEDS

A report from the Solid Waste Engineer sought suggestions for a synergistic project to maximise the use of organic resources currently wasted in the city, as a resource for community style gardens that would meet a wide range of social needs. A display of overhead slides was used to illustrate the proposal. It was noted that the project would address a number of needs contained in the Council's Social and Well-being Policy. The Board **decided** that it supported the concept and that suggestions in the form of organisations to contact be forwarded to the Solid Waste Engineer in order to progress the proposal.
