

5. ROA ROAD/TUI STREET – KERB AND CHANNEL RENEWALS RR10187

The Area Engineer presented a report advising the Board of the publicity plans which have been prepared showing the proposed street layout for new kerb and channel renewals and followed initial consultation with the residents of both streets.

It was **decided:**

1. That the information be received and the plans be circulated for public comment.
2. That as a matter of Board policy, landscaping and residents' involvement in the maintenance of street landscaping be included in the public consultation process for all street enhancement works in the Board's area.
3. That mountable kerb blocks be used at the intersection of Fendalton Road/Tui Street, and that the proposed platform at the Tui Street/Roa Road Street intersection be at a height to be effective as a traffic calming measure.
4. That the proposed plan for Roa Road be amended to provide for additional street trees.
