

3. GRAHAMS ROAD/GREERS ROAD INTERSECTION

The Board considered a report from the Traffic Engineer outlining concerns from local residents about the number of crashes occurring near the intersection and a petition received requesting that the Council carry out remedial work.

The report referred to the results of a crash reduction study, details of which were tabled and a number of low cost safety improvements were identified for implementation.

The Board was invited to submit any comments on the report to the City Services Committee.

The Board **decided** that the short term safety improvements be endorsed but that any longer term alterations await the outcome of the overall review of the city's ring road system.
