

### 23. **DYERS ROAD/LINWOOD AVENUE TRAFFIC SIGNALS**

The Committee considered a report on the proposal to reconstruct the intersection of Dyers Road and Linwood Avenue, and install traffic lights to replace the existing round-about.

A report on the intersection had been previously provided to the September meeting of the Committee and a timeline and public consultation for the project approved.

Since then the scheme had been refined and costing established together with an economic assessment which had been submitted to Transfund for subsidy.

The report detailed the problem definition, project objectives and provided details of budget. The report noted the total cost of the project was now estimated at \$1,244,410 as opposed to budget provision of \$400,000.

The Committee **decided**:

1. To approve the revised scheme and timeframe for construction.
2. To support additional funding for the project through the 2001/02 budget process.
