

## 21. STORM CLEAN UP

Ken Couling was in attendance and presented an overview of his report describing the storm experienced in Christchurch between 11-13 October 2000, reviewing how the waterways and drainage system coped with the event and recommending further investigations and remedial action to improve the functioning of the waterways and drainage system, should another similar storm event occur in future. The report focused on Christchurch's waterways and drainage system, rather than the City Council's storm emergency response which was the subject of an internal review reported elsewhere.

The Board **received** the information.
