

## 5. MIRFIELD PLACE - STREET TREES - SPECIES REPLACEMENT

Consideration was given to a report providing information on the possible species to be used for replacement of the Liquidambar trees in Mirfield Place if removal was finally decided upon.

The Board **decided** that subject to the Council's decision on the future of the trees and after full consultation with the residents thereafter, the Board's preferred replacement species is *Styrax japonica* (Snowball tree) and that semi-mature ready trees be used to reduce the impact on the streetscape.
