

14. RED LIGHT ENFORCEMENT CAMERAS EVALUATION TRIAL

The Committee considered a report on the trial installation of further red light enforcement cameras within the city.

Three proposals had been considered:

- Open Door
- Precision Technology
- Serco

The report outlined the details of each of the suppliers and the technology involved and indicated it was intended a trial of the three systems be undertaken during June to identify the best products to be utilised within the city.

The Committee **decided** that the trial should proceed using the Open Door, Serco and Precision Technology systems.
