

## 10. BEXLEY WETLAND RESTORATION

The City Design Drainage Team Leader and Parks Planner (Design) reported on investigations that have been taking place to determine the best method of treating the contaminated site within Bexley Wetland. The Board **decided:**

1. That it endorse the preferred option to excavate and relocate the contaminated material in a capped mound on the filled area within Bexley Wetland.
2. That the Parks and Recreation Committee be requested to transfer \$85,000 from the Estuary Green Edge budget to the Bexley Wetland budget to implement the preferred option outlined above.

The Board thanked the Parks Unit and City Design staff for their investigation and thorough analysis of this issue.
