

26. RESULTS FROM RED LIGHT ENFORCEMENT CAMERA TRIAL

The Committee considered a report on the trial of new technology undertaken over the previous 12 months on red light camera enforcement.

The report recommended that the existing Gatso red light camera continue to operate in the Colombo Street/Bealey Avenue and Lichfield/Barbadoes Street intersections. It also suggested the Council continue to work with the Police towards the installation of red light and speed enforcement cameras at the other intersections in Christchurch.

The Committee **decided**:

1. That the providers of the three red light enforcement cameras and the Police be thanked for the commitment they made to the trial.
2. That the existing red light enforcement camera poles and housings be replaced with motor driven cases at the identified sites as funding becomes available.
3. That the Council continue to operate the existing Gatso red light enforcement camera and investigate with the Police the joint use and possible purchase of a Precisiontech red light and speed on green enforcement camera.
