

14. STORM 11-13 OCTOBER 2000 - FOLLOW UP REPORT

The Parks and Waterways Manager reported on the flood damage reduction measures proposed for the south-east sector of the city, following a review of drainage systems carried out since the extreme storm experienced on 11-13 October 2000.

The remedial measures outlined in the report will address the problems which occurred during the October storm. The estimated cost of the operation and maintenance measures is \$23,900 and the cost of the capital works \$415,000. Provision has been made in the 2001/02 Parks and Waterways budget to fund the capital works.

In addition, a flood plan management study for Sumner is under way, which will identify long-term flood damage reduction measures. The report also recommended that the Living zones not be extended on Richmond Hill until issues associated with any additional storm run-off and safe secondary flow paths downstream have been resolved.

Individual reports were presented to the July meetings of the Hagley/Ferrymead, Spreydon/Heathcote and Burwood/Pegasus Community Boards. The Boards' comments on these reports were reported to the Committee.

The Committee **resolved**:

1. That the suite of measures described in the report to be implemented in response to the October 2000 storm be supported.
2. That it be recommended to the Resource Management Committee that Living zones not be extended on Richmond Hill until issues associated with any additional storm run-off and safe secondary flow paths downstream have been resolved.
3. That the Parks and Waterways Manager implement the recommendations of the Hagley/Ferrymead, Spreydon/Heathcote and Burwood/Pegasus Community Boards.
