

15. CRANFORD STREET/INNES ROAD INVESTIGATION

Discussion took place on possible interim measures for the Cranford Street/Innes Road intersection. It was suggested that the intersection could benefit from a tidal flow system similar to that on the Auckland Harbour Bridge. The representative from Montgomery Watson, David Turner, advised that this would need to be co-ordinated with other intersections. Mr Turner stated he would come back to the Board with more concrete proposals, and if there were any more suggestions he could be contacted at Montgomery Watson.
