

## 17. LAND TRANSPORT TRAFFIC CONTROL DEVICES RULE 54002

The Committee received a report from Brian Neill, City Streets Unit outlining the LTSA proposal to create a "*Traffic Control Devices Rule*" and seeking guidance to decide on the form of any submission on the Rule to be made by the Council.

The report outlined the background to the rule, on which submission close on 22 April 2003, and the objectives which were stated to be:

- *requiring uniformity in the form, appearance and placement of traffic control devices;*
- *establishing minimum standards for traffic control devices;*
- *specifying who may authorise and install traffic control devices; and*
- *ensuring that Road Controlling Authorities take safe road practices into account in the design and installation of traffic control devices used for traffic management.*

The Committee **decided**:

1. That the information relating to the Traffic Devices Rule process and requirements for Council and technical comment be received.
2. That staff prepare submissions and lodge them on or before 22 April 2003.
3. That the City Streets Manager report back to the May meeting of the Committee with a summary of the submissions.
