

## 8. LANDFILL GAS EXTRACTION PROJECT

The Committee considered a report by Simon Collin, Solid Waste Manager, City Water and Waste Unit providing information about the proposed gas extraction facility to be installed at the Burwood Landfill.

The report provided background to the problem of landfill gas odour and the proposal to mitigate this prepared by the Council's consultants (URS Limited) involving the installation of wells, collector pipes and an enclosed flare.

The report indicated the current programme provided for commissioning of the facility to take place in early March 2004 and that in the longer term the possibility of utilising gas extraction for power generation could be investigated.

The Committee **received** the report and decided to endorse the planned gas control work.
