10. LOSS OF BASEFLOW IN THE UPPER KAPUTONE STREAM - POSSIBLE CAUSES

The Committee considered a report from Nina Nikora, Planning Engineer, Greenspace Unit, identifying possible causes of the loss of baseflow in the Upper Kaputone Stream.

The report was considered by the Shirley/Papanui Community Board at its meeting on 5 May 2004 and the recommendations from the Board were considered in tandem with the recommendations from staff.

The Committee decided:

- 1. That, to understand the effect of urbanisation on surface and groundwater flows, the Northwood site be monitored using the following parameters:
 - groundwater flow rates from the existing and proposed groundwater discharge points.
 - groundwater levels at the locations where historical groundwater level information is available.
 - monitoring of groundwater flows around road and trench systems used for sewer and other services.
- 2. That the simultaneous monitoring of M35_1205 and M_35-3739 wells be continued and the monitoring of M35_1347 restarted to better understand the dynamics of the underground flow into and out of the Upper Kaputone Stream catchment.
- 3. That the Styx Living Laboratory Trust and associated group of residents continue to monitor the streamflow in the upper reaches of the Kaputone Stream on a regular basis (weekly or fortnightly).
- 4. That the feasibility of developing a mathematical groundwater model of the Upper Kaputone Stream catchment be investigated.
- 5. That relevant meteorological data be collated for estimating the evaporation and evapotranspiration over the last few years, to allow a more reliable assessment of the water balance dynamics of the Upper Kaputone Stream catchment.
- 6. That for any new subdivision with the Upper Kaputone Stream catchment a preferred stormwater disposal option be by way of soakage.
- 7. That the estimate of funds (approximately \$30,000) for the 2005/2006 Annual Plan be available as a contingency item for this project.
- 8. That the above project be coordinated with the work of other agencies such as Environment Canterbury and the University of Canterbury.
- 9. That the Council be provided with a progress report on the project in six months time.
