

## 11. REALLOCATION OF FUNDS WITHIN WATERWAYS AND WETLANDS CAPITAL BUDGET

<b>Officer responsible</b> Water Services Manager	<b>Author</b> Ken Couling
Corporate Plan Output: Capital Outputs p9.3.41 to 9.3.54	

The purpose of this report is to seek the approval the Strategy and Resources Committee for reallocation of funds to similar or associated projects as per Council policy on alterations to capital and operating budgets adopted at its meeting on 27 May 1999. At that meeting the Council delegated authority to this Committee to approve transfers in excess of \$300,000.

The total budget for Waterways and Wetlands capital outputs is approximately \$6.3M including just over \$300,000 carry forwards this financial year. This year for the first time the Waterways and Wetlands capital budget has been broken down to individual project level to improve coordination with other infrastructural asset units, Parks and City Streets in particular. Previously the capital budget comprised programme line items rather than project line items (e.g. waterway enhancement programme, utility waterway improvement programme etc).

Overall, the change to a more detailed project-based budget has facilitated coordination with other units and project budget control through the Project Systems module of the new FAMIS financial system. Of course the disadvantage of a project-based budget compiled 12 months or more prior to contract expenditure on the ground is that many changes can occur to project estimates, timing and priorities. This is reflected in the attached reallocation of funds list which identifies budget transfers totalling \$1.2M. In dollar terms this represents a 20 per cent change to the original budget. Common reasons for the changes requested include:

- altering project timing to coordinate better with other units' capital programmes
- planning delays due to lack of human resources, holdups with resource consents etc
- project timing changes due to either accelerated or delayed private development involving cost-sharing
- difficult negotiations for purchase or other protection instrument

It is anticipated that Waterways and Wetlands project budgeting will become more refined as staff experience with the new FAMIS financial system grows.

The above report was before the Parks and Recreation Committee at its meeting on 13 September 2000. As this agenda was distributed prior to the Committee's the meeting, the Committee's recommendation of the request was not available. It will be reported to the meeting.

**Recommendation:** That the \$1,201,700 reallocation of funds to similar or associated Waterways and Wetlands projects as identified on the attached list be approved for the 2000/01 financial year.

### **Chairman's**

**Recommendation:** That the above recommendation be adopted.
