

14. PUTRESCIBLE PROCESSING PLANT UPDATE

The Committee considered a report from Tony Moore, Resource Analyst, Solid Waste updating the Committee on the investigations into alternative waste technologies and progress with Global Renewables Limited (GRL) investigating the provision of a putrescible processing facility.

The report gave details of the background to the discussions with GRL and the current situation and the results of progress with alternative waste technologies such as:

- The HotRot Unit currently being trialed at Metro Place,
- Vermiculture (worm-farming).

The Committee **decided** that the City Water and Waste Unit report back to Committee in early 2003 concerning progress on the Global Renewables feasibility study and a suggested way forward.
