**SHIRLEY/PAPANUI COMMUNITY BOARD  
31 MARCH 2010**

**Report of a meeting of the Shirley/Papanui Community Board,  
held on Wednesday 31 March 2010 at 4pm  
in the Boardroom, Papanui Service Centre,  
corner Langdons Road and Restell Street, Papanui.**

**PRESENT:** Yvonne Palmer (Chairperson), Ngaire Button, Kathy Condon Pauline Cotter, Aaron Keown and Norm Withers.

**APOLOGIES:** An apology for absence was received and accepted from Matt Morris.

The Board reports that:

**PART A - MATTERS REQUIRING A COUNCIL DECISION**

**1. SIGNALISED INTERSECTION – LANGDONS/MAIN NORTH/MARY STREET – SAFETY AUDIT REPORT**

<b>General Manager responsible:</b>	General Manager City Environment, DDI 941-8608
<b>Officer responsible:</b>	Transport and Greenspace Manager
<b>Author:</b>	Sean Lewis, Senior Traffic Signals Engineer

**PURPOSE OF REPORT**

1. The purpose of this report is to present to the Council the Shirley/Papanui Community Board's recommendation that the signalised pedestrian crossing on the north approach to the Langdons/Main North/Mary Street be removed.

**EXECUTIVE SUMMARY**

2. The Board received a deputation from Helen Durelos at the meeting held on 21 May 2008, expressing that a safety audit be carried out at the intersection of Langdons/Main North/Mary Street. The purpose of this safety audit was borne from a concern that there is a danger to pedestrians crossing the signalised pedestrian crossing on the north leg of this intersection.
3. The Board decided to request staff to provide a safety audit report for this intersection including suggestions for improving pedestrian safety.
4. An interim response was provided to the Board meeting on 10 September 2009 advising that a traffic safety audit will be carried out once the proposed bus priority lanes have been installed and the effects on this intersection known.
5. The bus priority project was completed through this intersection in November, and the safety audit has since been carried out.
6. This is a very busy intersection on an arterial road, running at capacity during peak hours, and very busy during all daytime hours.
7. During daytime hours, between 70 to 90 per cent of the traffic using this intersection use the northern approach. Because of the high volume of traffic using this approach, and the lack of space for dedicated turning lanes, it is not possible to increase the pedestrian protection time without causing major congestion delays. These results and percentages of the intersection count data are shown in the table below.

Vehicles on North Approach (in or out)	Total Vehicles In Intersection	Time of Count	Percentage Using North Approach
1244	1387	07:00 – 08:00	90%
1396	1721	08:00 – 09:00	81%
1510	1927	14:00 – 15:00	78%
1607	1997	16:00 – 17:00	80%
1494	1831	17:00 – 18:00	82%
Hourly Average			82%

8. Mary Street and Langdons Road are offset from each other. This means that the intersection is not a true cross-road. This creates a situation where queued right turning traffic from Mary Street can not see past queued right turning traffic from Langdon's Road. Once the right turner sees a gap, they rush to turn, without checking to ensure it is clear of pedestrians. The same also applies with left turners from Langdon's Road not able to properly see the waiting right turners on Mary Street, creating another attention area distracting turning vehicles on either approach from checking or observing pedestrians.
9. As Langdons Road has a shared right turn and straight through lane, it is even harder for right turning traffic on Mary Street to know if a straight through vehicle is going to cut-out from behind the queuing right turning vehicle. In addition to this, Mary Street only has one lane, increasing the pressure on the right turner to clear the intersection to allow any straight through or left turning vehicles waiting behind to complete their manoeuvre.
10. There has only been one pedestrian related crash (minor injury) recorded in the Police/New Zealand Transport Authority Crash Database at this intersection over the last five years (please see attached crash report). This was a vehicle striking a pedestrian on this north pedestrian crossing point.
11. There is currently a three second 'early start' for pedestrians crossing at any point at this intersection. This produces an 'all-red' period for vehicles, allowing pedestrians to commence their crossing of the road before vehicles receive a green light. Because of the layout of the intersection, (shared through and turning lanes) we are not able to extend the early-start times.
12. The options are to remove this crossing point completely (improve safety), or to leave it as-is. At other intersections in Christchurch where safety concerns have been expressed, the signalised pedestrian crossing point has been removed. New signalised intersections are designed with sufficient space for turning lanes, allowing us to create specific signal phasing to eliminate such conflicts.
