Your Submission:	<p>The Little River Wairewa Promotions Group seeks the council to strongly consider</p> <p>a) Significantly increasing the number of town water supply connections to cope with existing households and future development - without adequate water supplies Little River is unable to grow and develop</p> <p>b) to immediately bring forward plans to upgrade wastewater schemes (to explore the feasibility of installing Natural Flow systems - an eco friendly and sustainable product requiring no power and minimal earthworks)</p> <p>c) to significantly upgrade facilities at the public toilets attached to the Little River Railway Station to cope with increased usage from cruise ship tour coaches, school camp coaches and increased tourist numbers</p> <p>d) to urgently attend to the drinking water in Little River which falls well below the national water standards.</p>
